SEMESTER: 6th Semester

Report Scope (Total: 50 Marks) — The report must cover the following:

1. Overview of the Organization
2. Vision and Mission of the Organization
3. Organization Structure
4. Roles and Responsibilities of Personnel in the Organization
5. Products and Market Performance

Evaluation Parameters	10	8	6	4	2	Student Score
Company Description / Overview of the Organization	A complete description of the company is given in paragraph form. Description highlights recent history and success of the organization and includes the current address.	Description of the company is present but lacking some details or not entirely in paragraph form.	Description of the company is lacking detailed views and not in paragraph form.	Description of the company is not in paragraph form.	Little or no description of the company.	
Vision and Mission of the Organization	Clarity of the vision and mission statements is excellent. Student has collected specific, consistent, and relevant statements of the organization excellently.	Clarity of the vision and mission statements is very good. Student has collected very specific, consistent, and relevant statements of the organization.	Clarity of the vision and mission statements is good. Student has a good collection of relevant statements of the organization.	Student does not have much clarity on the vision and mission of the organization. Some relevant statements collected are not accurate or specific.	Student has no clarity on the vision and mission of the organization and has not collected any relevant reports.	
Organization Structure	Clarity of the organization structure is	Student has very good clarity of the	Clarity of the organization structure is not	Description of the organization	Little or no description of the

Company Profile

SCONTINENT TECHNOLOGIES PVT LTD

1.Submit a report to training supervisor and copy the cohort owner focusing on:

1.1-Overview of the Organization

Fig 1.1 Company Logo

Scontinent Technologies Pvt Ltd is an active non-government private limited company incorporated on August 5, 2021, and headquartered in Bangalore, Karnataka. The company was founded by Mr. Vinay K H (CEO) and his team with a vision to provide specialized IT software solutions across thriving domains such as web designing, web development, and mobile application development for serving the global clientele. The company formally established its operations on September 15, 2019, before its official incorporation in 2021. Scontinent Technologies operates in the field of "Computer and related activities" with an authorized share capital of ₹10,00,000 and paid-up capital of ₹8,50,000 as of March 31, 2022, indicating reasonable financial strength for its operations.

The organization has quickly established itself as a significant player in the educational technology sector, successfully onboarding 65,000 students and reaching over 500 colleges within a short span. The company has signed Memorandums of Understanding (MOUs) with more than 20 colleges and collaborated with over 30 startup companies, demonstrating its strong market penetration.. The company is also associated with the Karnataka government for the "Upper Krishna Project," providing Structural Valuation Management solutions.

The company maintains a compact but highly qualified team of approximately 10-25 professionals who deliver services including digital learning platforms, web and mobile application development, IT process automation, and educational technology solutions.

Current Address: 32, Santosh Soudha, Near Bank of India ATM, Vidyanagar Cross, Bettahalasur, Bangalore, North Bangalore - 562157.
Contact: 9164563662 | office@studentcontinent.com
Website: https://www.scontinent.com/

1.2 Vision and Mission of the Organization

Vision Statement:

To be the global benchmark for multidisciplinary digital ecosystems, where technology helps to empower the next generation of leaders with the skills, connections, and innovation required to solve the complex challenges of the 21st century.

The vision emphasizes the company's desire to be at the forefront of technological transformation, suggesting a commitment to delivering solutions that drive global growth and success for clients and students alike.

Mission Statement:

To bridge the gap between academia and industry by providing a collaborative digital product that empowers empower, connect, and

grow through innovative technology and multidisciplinary knowledge exchange.

This mission reflects a focus on delivering customized solutions that meet specific needs while maintaining a core value system based on innovation, excellence, and customer-centricity.

1.3 Organization Structure

Scontinent Technologies operates with a focused leadership team comprising **three directors** who oversee the strategic and operational directions of the company. The structure is designed to promote innovation and transparency through the following levels:

- **Executive Management:** Led by **Mr. Kataveeranahalli Hanumantharayappa Vinay (CEO)**, who is responsible for major strategic decisions, global expansion, and maintaining a seat on the Board of Directors
- **Project Management & Technical Teams**: Comprising seasoned professionals who handle segments including AI-driven software solutions, web application development, and structural valuation management
- **Support & Marketing Departments:** Dedicated teams focusing on student outreach, college collaborations (MOUs), and digital learning platform maintenance.
- **Frontline Employees:** A team of approximately 25 highly qualified professionals who execute day-to-day operations and manufacturing support.
- **Interns (AI & ML):** Individuals like yourself who are integrated into the workflow to gain practical experience, set up development environments, and build ML models

1.4 Workflow Model:

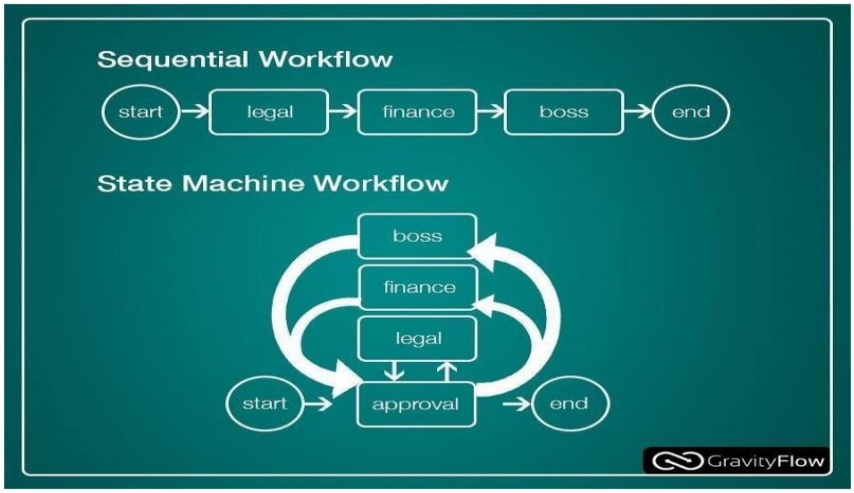

Figure 1.2: Workflow Model

1.5 Roles and Responsibilities of the Intern

As an intern specializing in **AI & ML**, my roles and responsibilities involve a blend of learning and technical execution:

- **Environment Setup:** Configuring development environments with Python libraries such as **NumPy, Pandas, and Scikit-learn** to facilitate data analysis.
- **Completed assigned programs:** As an intern, you may have been given specific programming tasks to complete. These could be related to the development of Machine Learning Model or could be standalone tasks.
- **Data Analysis:** Conducting **Exploratory Data Analysis (EDA)** and setting up baseline models to monitor and improve the Model Performance
- **Building ML model for the project assigned:** As an intern, you may have been involved in building a machine learning (ML) model for a particular project.You would be expected to work closely with other team members to ensure that the ML model meets the project's requirements.

- **Back-end connectivity:** As an intern, you may have been responsible for connecting the project to a back-end server or database. You would be expected to work closely with other developers and project managers to ensure that the back-end connectivity meets the project's requirements.

1.6 Products and Market Performance

Scontinent Technologies has established a strong market presence through its diverse service profile and educational impact:

- **Digital Learning Platform SamAI: Digital Learning Platform (Sconti App):** The flagship product of Scontinent Technologies, a comprehensive digital learning platform that enables students to access convenient and reasonably priced online education. The platform supports multidisciplinary knowledge sharing, connects students with professionals, provides internship and job opportunities, and helps students prepare for competitive examinations such as GATE, IES, and IAS. **On-boarded 65K Students:** In just one year, **SamAI** App has successfully on-boarded an impressive 50,000 students, demonstrating its widespread appeal and effectiveness in the educational sector.
- **Public Sector Achievement:** The company is a trusted partner of the Karnataka Government, specifically for the "Upper Krishna Project". Scontinent provided a Structural Valuation Management solution that accurately identifies measurements and calculates compensation values using CAD layouts.
- **Market Reach:** The company has signed **MOUs with over 20 colleges** and collaborated with more than **30 startup companies**.
- **Recognition:** Honored by state institutes for its transformative impact on the **Karnataka Education Sector** and recognized as a significant player in "Computer and related activities".
- Selected for **Elevate Grand Finale** 4th Round Under the Karnataka Startup Cell.

Case Presentation Evaluation Rubrics

SUBJECT: AI & ML

STUDENT NAME:

SUBJECT CODE:

REG NO:

Presentation Scope (Total: 30 Marks) — Students must present the following based on their company profile report:

Give a presentation on the company profile report covering all sections of the report.

Evaluation Parameters	5	4	3	2	1	Student Score
Delivery & Enthusiasm	Very clear and concise flow of ideas. Demonstrates passionate interest in the topic and strong engagement with the class/examiner.	Clear flow of ideas. Demonstrates interest in the topic and engagement with the class/examiner.	Most ideas flow but the presentation is lost at times. Limited evidence of interest in and engagement with the topic.	Hard to follow the flow of ideas. Lack of enthusiasm and interest.	No flow in the presentation. Poor presentation skills.	
Visuals	Visuals augmented and extended comprehension of the issues in unique and effective ways.	Use of visuals clearly related to the topic.	Limited use of visuals, loosely related to the topic.	No use of visuals.	Poor visuals used and some visuals are not easy to understand in terms of relevance.	
Staging	Uses stage effects such as props, sound effects, and speech modulation in a unique and dramatic manner that enhances the understanding of the issues in the problem statement.	Uses stage effects such as props, sound effects, and speech modulation in an effective manner to extend the understanding of the issues in the problem statement.	Limited use of stage effects and/or used in a manner that did not enhance the understanding of the issues in the problem statement.	No use of stage effects.	Poor stage effects usage.	

Evaluation Parameters	5	4	3	2	1	Student Score
Involvement of the Class / Examiners (Questions, Discussions & Activities)	Excellent and salient discussion points that elucidated material to develop a deep understanding. Appropriate and imaginative activities used to extend understanding in a creative manner.	Questions and discussions addressed important information that developed understanding. Appropriate activities used to clarify understanding.	Questions and discussions addressed important but superficial issues of the problem statement. Limited use of activities to clarify understanding.	Little or no attempt to engage the class/examiner in demonstrating their learning.	Did not engage the class/examiner and demonstrated poor listening skills.	
Content & Knowledge	Demonstrates excellent understanding of the subject matter. All concepts explained accurately, confidently, and in depth, with strong connection to the company profile report.	Demonstrates good understanding of the subject matter. Most concepts explained accurately and clearly with good reference to the company profile report.	Demonstrates basic understanding of the subject matter. Some concepts explained adequately but lacks depth or accuracy in places.	Demonstrates limited understanding. Explanations are unclear or inaccurate in several areas.	Demonstrates little or no understanding of the subject matter. Content is missing or largely inaccurate.	
Time Management	Presentation is very well-paced and completed confidently within the allotted time. Time is distributed effectively across all sections.	Presentation is well-paced and completed within the allotted time. Time is reasonably distributed across sections.	Presentation is mostly within the allotted time but pacing is uneven, with some sections rushed or over-extended.	Presentation exceeds or falls significantly short of the allotted time. Pacing is poor and affects the overall flow.	No regard for time management. Presentation is either incomplete or far exceeds the allotted time.

1

AGENDA

1. Overview of the Organization
2. Vision and Mission
3. Organization Structure
4. Roles and Responsibilities
5. Products and Market Performance
6. Conclusion

2

1.Overview of the Organization

Full Name: Scontinent Technologies Private Limited.

Incorporation: Formally incorporated on August 5, 2021

Founder: Mr. Vinay KH (CEO) and his team

Industry: Computer related activities, web designing, mobile application development, and web development.

Location: 32, Santosh Soudha, Near Bank of India ATM, Vidyanagar Cross, Bettahalasur, Bangalore, North Bangalore - 562157.

Core Product: Sam Ai

3

2.Vision and Mission

- **Vision Statement:**
  To be the global benchmark for multidisciplinary digital ecosystems, where technology helps to empower the next generation of leaders with the skills, connections, and innovation required to solve the complex challenges of the 21st century.

- **Mission Statement**:
  To bridge the gap between academia and industry by providing a collaborative digital products that empowers , connect, and grow through innovative technology and multidisciplinary knowledge exchange.

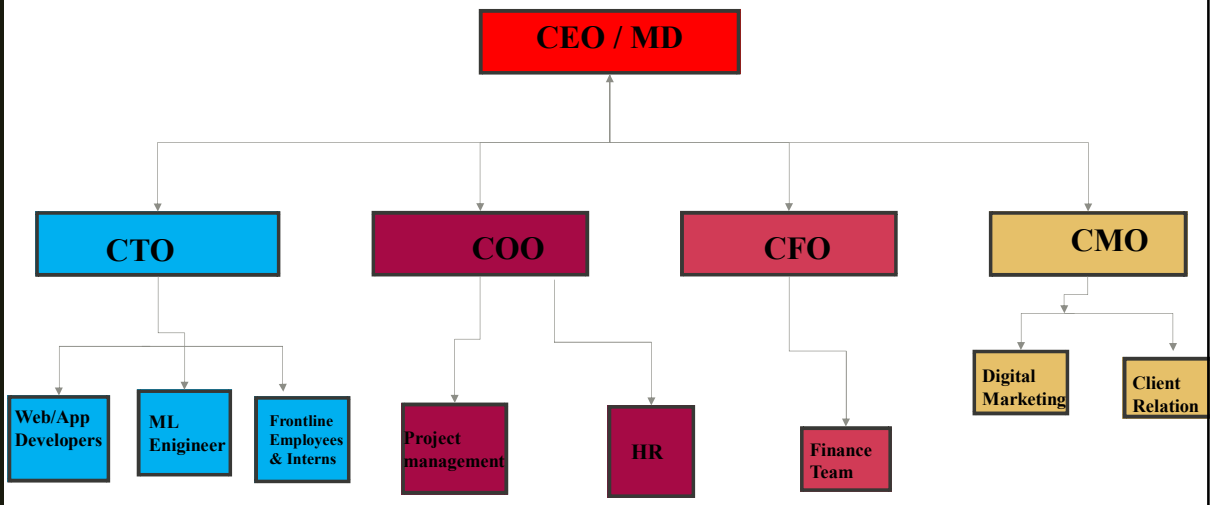
4

3.Organization Structure

- **Key Leadership:** CEO Mr. Vinay KH
- **Workforce:** A team of approximately 25 professionals specializing in various designations.
- **Workflow Model:** The company utilizes Sequential and State Machine workflows for finance, and approval processes

5

ORGANIZATION STRUCTURE Scontinent Technologies Private Limited.



4.Roles and Responsibilities

Chief Executive Officer (CEO/MD)

- This role coordinates all departments, makes critical business decisions, and represents the company externally.

Chief Technology Officer (CTO)

- Manages the technology roadmap and AI/ML strategy for the Scontinent Technologies Private Limited.

7

Chief Operations Officer (COO)

- Handles day-to-day operations and ensures smooth project delivery across departments.
- This role manages Human resources, ensures regulatory compliance, and optimizes operational processes.

Chief Financial Officer (CFO)

- This role ensures legal compliance, manages investor relations, and protects the company's financial interests.

Chief Marketing Officer (CMO)

- The CMO analyzes market trends to identify growth opportunities.

8

Web/App Developers: Designing front-end (JavaScript, HTML5) and back-end (Python, Java) solutions.

ML Enigineer: Dedicated for building Machine learning models

Frontline Employees & Interns: Professionals and interns who execute technical tasks, perform day-to-day operations,.

Project Management: Manage the Project from starting to ending of project

HR: Talent management and employee engagement

Finance Staff: Manage the finance of company

Digital Marketing: Keeps track on Digital ads, Ad performance

Client Relation: Handling customer service, email support, and live chat for the student community.

9

5.Products and Market Performance

- Selected for **Elevate Grand Finale** 4th Round Under the Karnataka Startup Cell
- **Digital Platforms:** The "SAM AI " has successfully on-boarded **65,000 students**, providing accessible and affordable online education.
- **Public Sector Projects:** The company provided the Structural Valuation Management solution for the "Upper Krishna Project" for the Karnataka Government
- **Services:** Offers comprehensive Web Applications using JavaScript and HTML5, and Android Applications with a focus on background services and broadcast receivers.

Website: https://www.scontinent.com/

10

6.Conclusion

Scontinent Technologies exemplifies excellence through its culture of **integrity, collaboration, and continuous improvement**. For a final year student, the exposure to their sequential and state machine workflow models has provided a professional foundation that standard coursework alone cannot provide. I am confident that the skills I have nurtured here will allow me to contribute meaningfully to the evolving tech landscape.

11

THANK YOU

12

CONTINUOUS INTERNAL EVALUATION -II

Government of Karnataka

Department of Collegiate and Technical Education

S J (Govt) Polytechnic

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Continuous Internal Evaluation-2

Continuous Internal Evaluation- CIE - II conducted at the end of 8th week			
SL No	**Assessment of On Job Training (OJT)-1 + Use Case 1**	**Max Marks**	**Obtained Marks**
1	Select any one job role of his/her interest in an organization or role assigned by the training supervisor for next Four weeks and submit a report to the training supervisor and copy to cohort owner focusing on: 1. Intern's ability to apply the skill and technical knowledge on OJT-1 2. Intern's performance on assigned tasks and project 3. Extent of Intern's ability to add value to the organization through internship	**50**	
2	Document a Use case on a task where he is working as intern	**30**	
	Total	**80**	

Note:

1. CIE-II shall be assessed by the Industrial Training Supervisor using companies' assessment Tools/Rubrics
2. Cohort owner shall assist the Industrial Training Supervisor during assessment of CIE-II

Signature of the Industrial Training Supervisor

Signature of the Cohort Owner

Continuous Internal Evaluation II

(On Job Training -1 and Use Case-1)

Student Name: **Register No.:**

Host Organization: **Job Role:**

Subject: Internship on AI & ML **Subject Code:**

Semester: 6th Semester **Date of Evaluation:**

Evaluation Scope:

The intern selects or is assigned a job role for 4 weeks and is evaluated on the following:

1. Intern's ability to apply skills and technical knowledge on OJT-1
2. Intern's performance on assigned tasks and projects
3. Extent of intern's ability to add value to the organization through the internship
4. Documentation of a use case on a task where the student is working as an intern

Section A: Internship Report Evaluation (Total: 50 Marks)

Evaluation Parameters	10	8	6	4	2	Score
Application of Skills & Technical Knowledge (OJT-1)	Consistently and effectively applied technical skills and knowledge from OJT-1 to real work situations with excellent outcomes.	Applied technical skills and knowledge from OJT-1 to most work situations effectively with good outcomes.	Applied technical skills and knowledge from OJT-1 to some work situations with satisfactory outcomes.	Made limited attempts to apply technical skills and knowledge from OJT-1; outcomes were below expectations.	Showed little or no application of technical skills and knowledge from OJT-1.	
Performance on Assigned Tasks	Completed all assigned tasks accurately, on time, and to a very high standard with minimal supervision.	Completed most assigned tasks accurately and on time with only minor errors and occasional supervision.	Completed assigned tasks satisfactorily but required regular supervision and made occasional errors.	Completed some assigned tasks but frequently required guidance; quality and timeliness were inconsistent.	Failed to complete assigned tasks adequately; required constant supervision and produced poor quality work.	
Value Addition to the Organization	Made significant and measurable contributions to the organization; proactively identified and solved problems beyond assigned tasks.	Made notable contributions to the organization; occasionally went beyond assigned tasks to add value.	Made some contributions to the organization within the scope of assigned tasks.	Made minimal contributions; largely limited to completing only basic assigned duties.	Made little or no meaningful contribution to the organization during the internship period.	
Quality & Presentation of Report	Report is exceptionally well-structured, clearly written, comprehensive, and covers all required focus areas in depth.	Report is well-structured and clearly written, covering most required focus areas with adequate depth.	Report is adequately structured and covers the required focus areas but lacks depth in some sections.	Report is poorly structured or incomplete; some required focus areas are missing or insufficiently covered.	Report is very poorly written, largely incomplete, or does not address the required focus areas.	

Evaluation Parameters	10	8	6	4	2	Score
Job Role Understanding & Relevance	Demonstrates excellent understanding of the selected or assigned job role and its relevance to the organization; report is highly focused and relevant.	Demonstrates good understanding of the job role and its relevance; report is mostly focused and relevant.	Demonstrates basic understanding of the job role; report is reasonably relevant but lacks specificity.	Demonstrates limited understanding of the job role; report has limited relevance to the organization.	Demonstrates little or no understanding of the job role; report lacks relevance.	
Total (Section A)						/50

Section B: Use Case Documentation (Total: 30 Marks)

Evaluation Parameters	10	8	6	4	2	Score
Clarity & Relevance of Use Case	Use case is exceptionally clear, well-defined, and highly relevant to the intern's assigned task and organizational context.	Use case is clear, well-defined, and relevant to the intern's assigned task and organizational context.	Use case is adequately defined and mostly relevant, but lacks clarity or specificity in some areas.	Use case is poorly defined or only partially relevant to the intern's assigned task.	Use case is unclear, irrelevant, or missing key elements.	
Documentation Quality & Structure	Document is exceptionally well-structured with all standard use case components (actors, flow, preconditions, post-conditions) present, accurate, and detailed.	Document is well-structured with most standard use case components present and mostly accurate.	Document has an adequate structure but is missing some components or contains minor inaccuracies.	Document is poorly structured; several key components are missing or inaccurate.	Document is very poorly structured or incomplete; most key components are absent.	
Technical Accuracy & Depth of Analysis	Use case demonstrates excellent technical accuracy and deep analysis of the task, showing strong understanding of the intern's work.	Use case demonstrates good technical accuracy and reasonable analysis of the task.	Use case demonstrates basic technical accuracy with some analysis, but lacks depth.	Use case contains technical inaccuracies or very limited analysis.	Use case is technically inaccurate or demonstrates no meaningful analysis.	
Total (Section B)						/ 30
Grand Total (Section A + Section B)						/ 80

On Job Training– 1

1.Select any one job role of his/her interest in an organization for next 4 weeks and submit a report to the training supervisor and copy to cohort owner focusing on:

Job Role: Machine Learning and Software Development Intern

In modern financial sectors, the application of machine learning has significantly increased due to its ability to analyze massive volumes of complex data and provide accurate, data-driven predictions. Financial institutions continuously require robust models to forecast market trends, assess credit risk, and detect fraudulent activities. However, traditional methods are frequently time-consuming and often lack the sophisticated analytical capabilities offered by modern computational intelligence.

This internship focused on developing a machine learning-based application for predicting and explaining financial outcomes using Artificial Intelligence(AI). The system integrates data preprocessing, database handling, advanced modeling, and an intuitive interface to create a complete analytical pipeline.

1.1Application of Skills and Technical Knowledge

During the internship, a wide range of technical skills and tools were applied to develop the system. The project required integration of data science concepts, backend development, and machine learning methodologies.

- **Programming Language: Python**
    - Python was primarily used for development, logic building, handling datasets, and data integration.

- **Libraries Used: Pandas, Scikit-learn**

    - Pandas was used for data processing tasks such as data cleaning, removing duplicates, handling missing values, and formatting structural data. Scikit-learn was used for training and evaluation of statistical models.

- **Frontend Technologies: HTML, CSS, JavaScript**

    - To make the predictive models accessible to non-technical financial analysts, a modern, responsive web interface was constructed. HTML was used for the semantic structuring ,Cascading Style Sheets (CSS) were employed heavily to design an aesthetic, intuitive, and highly professional layout

- **API & Backend Support**

    - Backend logic and routes were handled to allow smooth communication between data streams and the prediction engine, maintaining scalable architecture and prompt endpoint responses.

- **Testing Tools**
    - Independent scripts and automated routines were executed to test prediction accuracy, ensuring that the results matched historical financial expectations.

1.2-Performance on Assigned Tasks and Project

The development followed a step-by-step approach where each model component was built, tested, and fine-tuned.

The major project handled during the internship was the Finance AI System.

The workflow included:

- Downloading and ingesting financial data securely.
- Exploring and extracting prominent features through feature engineering.
- Removing duplicate data and interpolating missing records.
- Training predictive models on historical financial data (regression and classification).
- Testing and validating the pipeline without human interventions.

1.3-Value Addition to the Organization

The internship contributed meaningful value to the organization by illustrating how machine learning explainability can optimize risk analysis and forecasting in the financial sector.

Key contributions include:

- Automation of complex data validation and preprocessing tasks.
- Improved financial forecasting with minimized manual heuristic errors.
- Providing 'black-box' transparency to help stakeholders trust ML decisions.
- Reducing the required time to generate financial reports securely.

The structured data pipeline adds direct operational value, bridging the gap between complex machine learning algorithms and practical financial decision-making.

1.4-Job Role Understanding and Relevance

The role undertaken aligned directly with Data Science and AI Development. Responsibilities extended beyond simple model training to include data sanitization, API integrations, interpretation of algorithmic outputs, and system stabilization.

Use Case-1

2 Document a Use Case on a Task where he/she is working as an intern

Use Case Documentation

2.1. Use Case Title

Explainable Financial AI Prediction System

2.2 Description

The system allows automatic processing of financial data or market history to proactively predict future trends, asset risks, or creditworthiness. It outputs both a statistical likelihood and an explainable breakdown of deciding features.

2.3 Actors

- System Administrator
- Financial Analyst / User

2.4 Inputs

- Financial statements and historical index values.
- Credit amount data and demographic factors.
- Specific transaction limits.
- User operational triggers via the interface.

2.5 Process

- The process begins when the financial data is sourced into the pipeline.
- The system executes pre-processing scripts to normalize input sizes, rectify null values, and convert categorical textual data to encodings.
- Validated data is fed into the predictive machine learning models.
- The models perform inferences to output a prediction indicating potential risk or growth.
- Subsequently, an AI module dissects the prediction, mapping it to exact feature weights.
- Results—both the analytical scores —are returned to the user.

2.6 Results and Discussion:

The system generates two primary types of analytical results to assist financial stakeholders:

- **Analytical Scores:** It outputs a statistical likelihood or "analytical score" indicating potential financial risk or growth.
- **Data Representations:** Results are delivered as feature importance graphs, structured JSON, or tabular data summaries

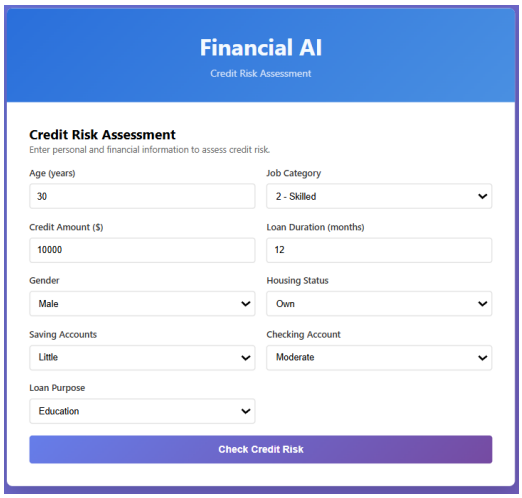

Fig 2.1 Financial AI Interface

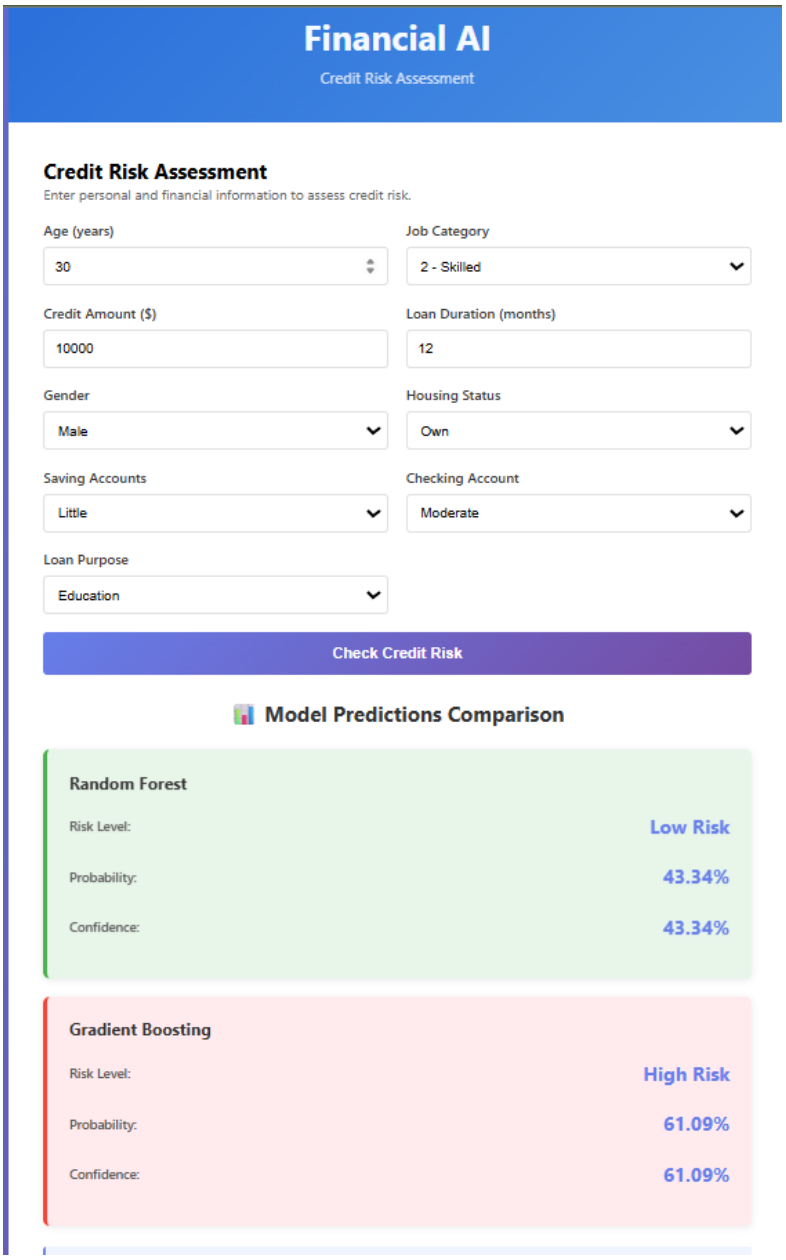

Fig 2.2 Financial AI Prediction

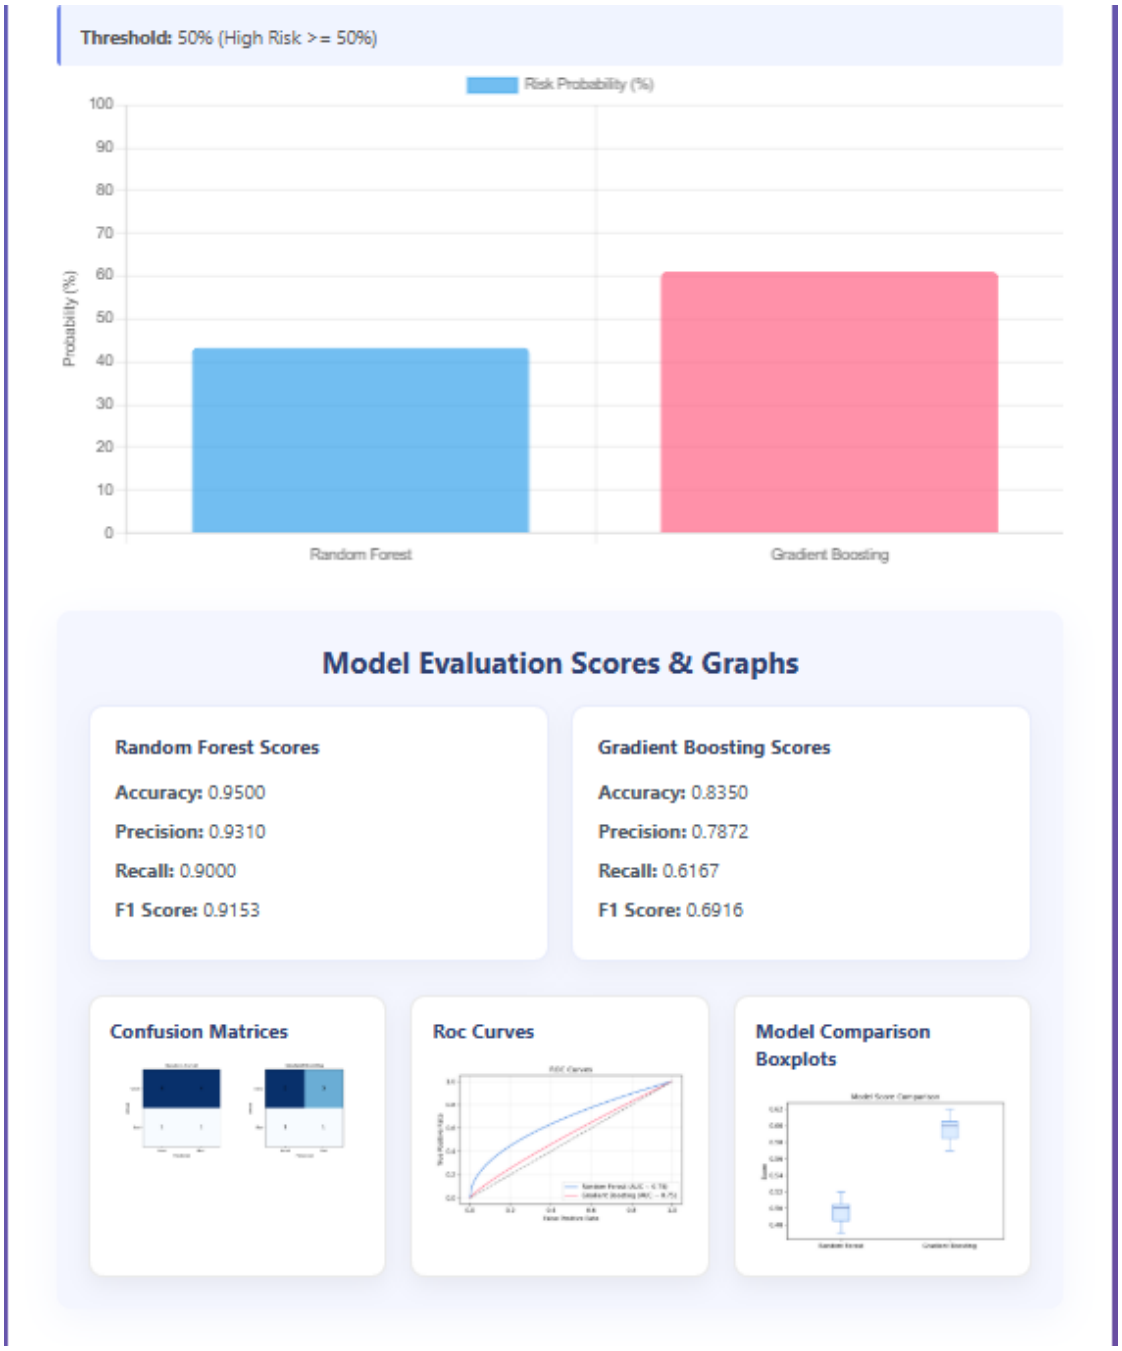

Fig 2.3 Financial Ai Model Evaluation Scores and Graphs

2.7 Workflow Diagram

The following flowchart illustrates the data flow from ingestion to prediction output.

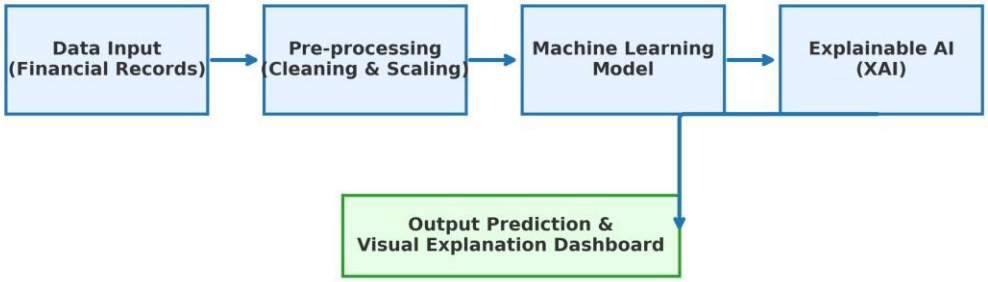

Fig 2.4 Financial AI Model Workflow Model

2.8 Advantages

- Promotes trust in AI for critical financial operations.
- Saves valuable time typically required for extensive human-led quantitative validations.
- Highly scalable and compatible with different dataset sizes.
- Detects nuanced predictive patterns human analysts might overlook.

2.9 Limitations

- Severely impacted by the availability and quality of training datasets.
- Cannot fully account for unprecedented, volatile market crashes (Black Swan events).
- Computationally intensive during extreme bulk queries.

2.10 Future Enhancements

The current ecosystem could be improved by connecting real-time financial APIs (e.g., Bloomberg, Yahoo Finance) to eradicate manual dataloading stages completely. Adding Natural Language Processing (NLP) to analyze immediate sentiment from financial news could drastically increase forecast agility. Additional focus on optimizing model training pipelines would reduce operational overhead.

Conclusion

In conclusion, the project emphasized the practical execution of analytical models in high-stakes environments. The Explainable Finance AI project actively translated raw strings of financial data into readable, logical reports equipped with explainability parameters.

Leveraging sophisticated tools and modern ML techniques, the solution bridges the gap between pure mathematics and human-understandable finance decisions. This internship significantly refined my technical capabilities, problem-solving rationale, and comprehension of industrialgrade software engineering.

Continuous Internal Evaluation- CIE - III conducted at the end of 12th week			
SL No	**Assessment of On Job Training (OJT)-2 + Use Case 2**	**Max Marks**	**Obtained Marks**
1	Select another job role of his/her interest in an organization or role assigned by the training supervisor for next Four weeks and submit a report to the training supervisor and copy to cohort owner focusing on: 1. Intern's ability to apply the skill and technical knowledge on OJT-2 2. Intern's performance on assigned tasks and project 3. Extent of Intern's ability to add value to the organization through internship	**50**	
2	Document a Use case on a task where he is working as intern	**30**	
	Total	**80**	

Note:

1. CIE-III shall be assessed by the Industrial Training Supervisor using companies' assessment Tools/Rubrics
2. Cohort owner shall assist the Industrial Training Supervisor during assessment of CIE-III

Continuous Internal Evaluation III

(On Job Training -2 and Use Case-2)

Student Name: **Register No.:**

Host Organization: **Job Role:**

Subject: Internship on AI & ML **Subject Code:**

Semester: 6th Semester **Date of Evaluation:**

Evaluation Scope:

The intern selects or is assigned a job role for 4 weeks and is evaluated on the following:

1. Intern's ability to apply skills and technical knowledge on OJT-1
2. Intern's performance on assigned tasks and projects
3. Extent of intern's ability to add value to the organization through the internship
4. Documentation of a use case on a task where the student is working as an intern

Section A: Internship Report Evaluation (Total: 50 Marks)

Evaluation Parameters	10	8	6	4	2	Score
Application of Skills & Technical Knowledge (OJT-2)	Consistently and effectively applied technical skills and knowledge from OJT-1 to real work situations with excellent outcomes.	Applied technical skills and knowledge from OJT-1 to most work situations effectively with good outcomes.	Applied technical skills and knowledge from OJT-1 to some work situations with satisfactory outcomes.	Made limited attempts to apply technical skills and knowledge from OJT-1; outcomes were below expectations.	Showed little or no application of technical skills and knowledge from OJT-1.	
Performance on Assigned Tasks	Completed all assigned tasks accurately, on time, and to a very high standard with minimal supervision.	Completed most assigned tasks accurately and on time with only minor errors and occasional supervision.	Completed assigned tasks satisfactorily but required regular supervision and made occasional errors.	Completed some assigned tasks but frequently required guidance; quality and timeliness were inconsistent.	Failed to complete assigned tasks adequately; required constant supervision and produced poor quality work.	
Value Addition to the Organization	Made significant and measurable contributions to the organization; proactively identified and solved problems beyond assigned tasks.	Made notable contributions to the organization; occasionally went beyond assigned tasks to add value.	Made some contributions to the organization within the scope of assigned tasks.	Made minimal contributions; largely limited to completing only basic assigned duties.	Made little or no meaningful contribution to the organization during the internship period.	
Quality & Presentation of Report	Report is exceptionally well-structured, clearly written, comprehensive, and covers all required focus areas in depth.	Report is well-structured and clearly written, covering most required focus areas with adequate depth.	Report is adequately structured and covers the required focus areas but lacks depth in some sections.	Report is poorly structured or incomplete; some required focus areas are missing or insufficiently covered.	Report is very poorly written, largely incomplete, or does not address the required focus areas.	

Evaluation Parameters	10	8	6	4	2	Score
Job Role Understanding & Relevance	Demonstrates excellent understanding of the selected or assigned job role and its relevance to the organization; report is highly focused and relevant.	Demonstrates good understanding of the job role and its relevance; report is mostly focused and relevant.	Demonstrates basic understanding of the job role; report is reasonably relevant but lacks specificity.	Demonstrates limited understanding of the job role; report has limited relevance to the organization.	Demonstrates little or no understanding of the job role; report lacks relevance.	
Total (Section A)						/50

Section B: Use Case Documentation (Total: 30 Marks)

Evaluation Parameters	10	8	6	4	2	Score
Clarity & Relevance of Use Case	Use case is exceptionally clear, well-defined, and highly relevant to the intern's assigned task and organizational context.	Use case is clear, well-defined, and relevant to the intern's assigned task and organizational context.	Use case is adequately defined and mostly relevant, but lacks clarity or specificity in some areas.	Use case is poorly defined or only partially relevant to the intern's assigned task.	Use case is unclear, irrelevant, or missing key elements.	
Documentation Quality & Structure	Document is exceptionally well-structured with all standard use case components (actors, flow, preconditions, post-conditions) present, accurate, and detailed.	Document is well-structured with most standard use case components present and mostly accurate.	Document has an adequate structure but is missing some components or contains minor inaccuracies.	Document is poorly structured; several key components are missing or inaccurate.	Document is very poorly structured or incomplete; most key components are absent.	
Technical Accuracy & Depth of Analysis	Use case demonstrates excellent technical accuracy and deep analysis of the task, showing strong understanding of the intern's work.	Use case demonstrates good technical accuracy and reasonable analysis of the task.	Use case demonstrates basic technical accuracy with some analysis, but lacks depth.	Use case contains technical inaccuracies or very limited analysis.	Use case is technically inaccurate or demonstrates no meaningful analysis.	
Total (Section B)						/ 30
Grand Total (Section A + Section B)						/ 80

On Job Training-2

1 Select any one job role of his/her interest in an organization for next 4 weeks and submit a report to the training supervisor and copy to cohort owner focusing on:

Job Role: Machine Learning and Software Development Intern

In modern recruitment and corporate sectors, the application of machine learning has significantly increased due to its ability to analyze massive volumes of unstructured document data and provide accurate, automated insights. Organizations continuously require robust models to parse candidate information, assess skill relevance, and categorize professional backgrounds. However, traditional manual screening methods are frequently time-consuming and often lack the sophisticated analytical capabilities offered by modern computational intelligence.

This internship focused on developing a machine learning-based application for extracting and structuring information from resumes using Natural Language Processing (NLP). The system integrates data preprocessing, document parsing, entity recognition, and an intuitive interface to create a complete analytical pipeline. The work carried out during the internship involved developing robust extraction algorithms, implementing text-cleaning techniques, creating entity-based visualizations, and integrating these features into a unified system. The primary objective was to build a scalable, efficient, and transparent parsing system that provides HR stakeholders with justifiable and structured candidate data.

3.1 Application of Skills and Technical Knowledge

During the internship, a wide range of technical skills and tools were applied to develop the system. The project required integration of data science concepts, backend development, and natural language processing methodologies.

- **Programming Language: Python** Python was primarily used for development, logic building, handling document streams, and library integration.
- **Libraries Used: SpaCy, PyResparser, Pandas** Pandas was used for data processing tasks such as data cleaning and formatting structural data. SpaCy and PyResparser were applied to add entity recognition for extracting names, contact details, and skills.
- **Frontend Technologies: HTML, CSS, JavaScript** To make the parsing models accessible to recruiters, a modern, responsive web interface was constructed. HTML was used for the semantic structuring of the resume upload forms. Cascading Style Sheets (CSS) were employed heavily to design an aesthetic layout featuring clean gradients and responsive components.
- **API & Backend Support** Backend logic and routes were handled to allow smooth communication between the file upload stream and the NLP engine.

3.2 Performance on Assigned Tasks and Project

The assigned tasks were completed in a structured and systematic manner. The development followed a step-by-step approach where each parsing component was built, tested, and fine-tuned. The major project handled during the internship was the **AI Resume Parser System**.

The workflow included:

- Uploading and ingesting resume files (PDF and DOCX) securely.
- Exploring and extracting prominent text features through NLP.

- Removing duplicate text noise and formatting inconsistent records.
- Training entity recognition models on diverse resume layouts.
- Implementing extraction modules to interpret precisely which skills and experiences were detected.
- Testing and validating the extraction pipeline without human interventions.

Challenges such as inconsistent document formatting and non-standard fonts were addressed iteratively. All assigned tasks were delivered within the stipulated schedule.

3.3 Value Addition to the Organization

The internship contributed meaningful value to the organization by illustrating how NLP can optimize candidate screening and data management in the recruitment sector. Key contributions include:

- Automation of complex document validation and text preprocessing tasks.
- Improved candidate matching with minimized manual screening errors.
- Providing structured data transparency to help recruiters trust automated extraction.

3.1.4 Job Role Understanding and Relevance

The role undertaken aligned directly with AI Development and Software Engineering. Responsibilities extended beyond simple script writing to include document sanitization, API integrations, and system stabilization. This workflow fostered an understanding of how NLP models transition from theoretical scripts to active industry frameworks.

Use Case-2

2.Document a Use Case on a Task where he/she is working as an intern

Use Case Documentation

2.1 Use Case Title:

AI Resume Parser and Entity Extractor

2.2 Description

The system allows automatic processing of resume files to proactively extract contact details, educational background, and technical skills. It outputs a structured summary of the candidate's profile.

2.3 Actors:

- System Administrator
- HR Recruiter / Hiring Manager

2.4 Inputs:

- Resume documents (PDF, DOCX)
- Job description text

2.5-Process:

- The process begins when the resume file is uploaded into the pipeline.
- The system executes pre-processing scripts to convert documents to raw text and remove noise.
- Cleaned text is fed into the Named Entity Recognition (NER) models.
- The models perform inferences to identify names, emails, and skill sets.

- Model prediction using Ridge Regression and Random Forest
- Subsequently, a mapping module organizes extracted entities into categories.
- Results—both the visual summary and structured data—are returned to the user.

2.6 Results and Discussion:

- Resume Scores (Model-based and average)
- Job Match Percentage
- Feature Importance Graph
- Model Performance Comparison
- Score Comparison Chart

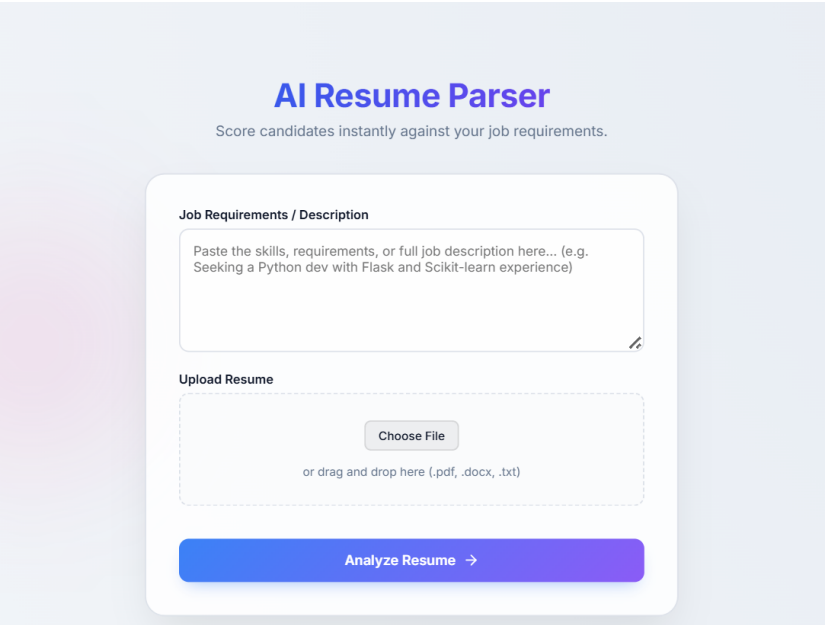

Fig 3.1: AI Resume Parser Interface

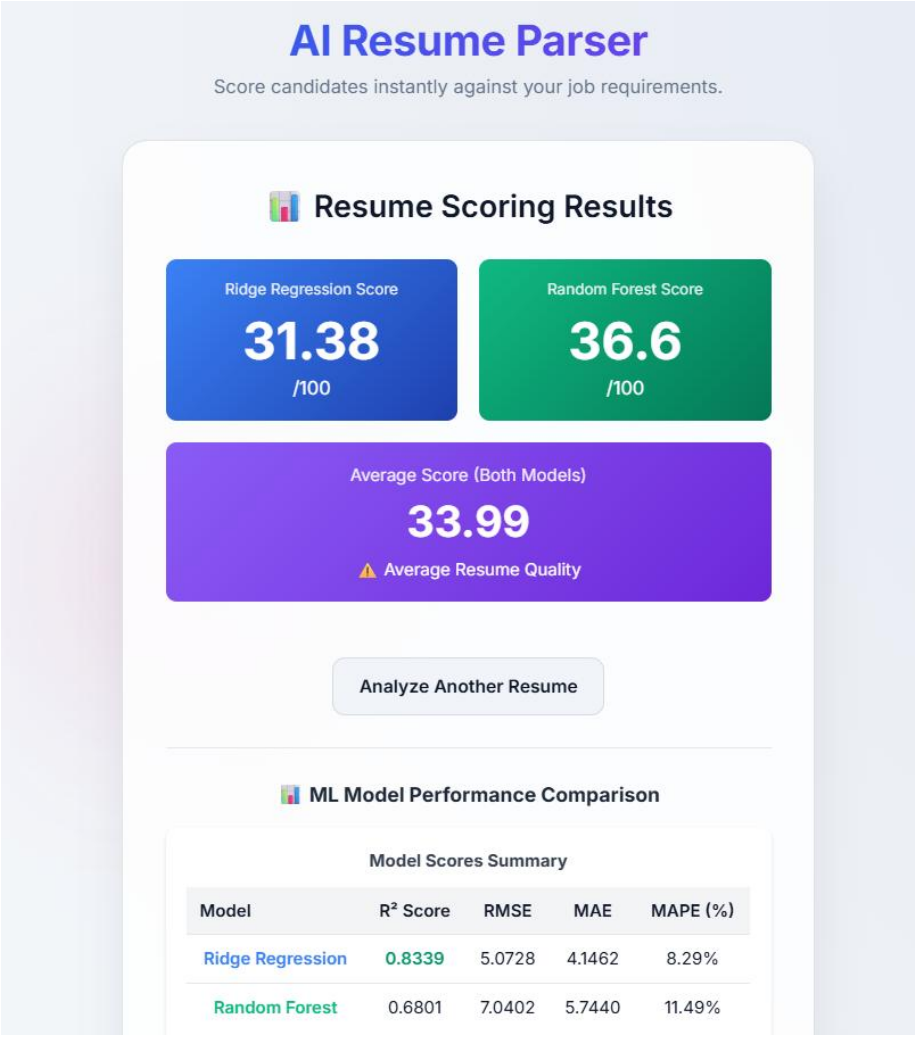

Fig 3.2: AI Resume Parser Result

Fig 3.3: AI Resume Parser Model Evaluation Scores and Graphs

2.7 Workflow Diagram

The following flowchart illustrates the data flow from ingestion to prediction of Output

Figure 3.4: AI Resume Parser Workflow Diagram

2.8 Advantages:

- Promotes efficiency in high-volume hiring operations.
- Saves hours of manual data entry for HR teams.
- Highly scalable for processing hundreds of resumes simultaneously.
- Detects specific technical skills that manual reviewers might overlook.

2.9 Limitations:

- Impacted by highly creative or non-standard resume layouts.
- Cannot fully interpret complex, non-textual graphic elements.
- Computationally intensive during large batch uploads.

2.10 Future Enhancements:

Integrating real-time LinkedIn profile scraping to verify candidate details automatically. Adding sentiment analysis to evaluate the "About Me" sections could provide deeper personality insights. Optimizing the parsing speed for mobile-based uploads would improve accessibility.

Conclusion

In conclusion, the project emphasized the practical execution of NLP models in corporate environments. The AI Resume Parser project actively translated unstructured documents into readable, logical reports. Leveraging modern Python libraries, the solution bridges the gap between raw document data and efficient HR decision-making. This internship significantly refined my technical capabilities and comprehension of industrial-grade software engineering.

Thank You
